Maersk Deliverer will become the First Ever Rig to used MPD System
Offshore Australia

I have now been given approval to expand a bit further.

It was important for the Safety Case submission, that a well-known and professional facilitator / report writer be used for the HAZOP studies.

My company, and myself, were chosen and facilitated a Process HAZOP in July 2019 and an Ops HAZOP in January 2020.

Maersk Drilling were our client, since they are providing an MPD-ready rig, and we worked with RPS, Inpex, Safekick and Weatherford at the HAZOPs.

We've been doing this kind of MPD support since 2014. We facilitated both the HAZOP and DWOP for the record-breaking well PMCD in 2855m (water depth) in Malaysia.

We started our MPD journey in 2014, with a HAZOP the first ever BTR x PMCD off a dynamically-positioned rig. Since then we've done multiple HAZOPs and DWOPs for first-ever applications of MPD and/or RGH systems in Angola, Canary Islands, Senegal, Mauritania, Cyprus, Ireland, French Guiana, Lebanon, Egypt, Indonesia, Malaysia.

We are also very closely linked with HPHT training and support and our associates are very active in the DWOS (Drill Well on Simulator) arena.
